Cloud computing is an incredible opportunity, with flexible and scalable computing resources available to you when you need them. Virtualization extends that scalability into the datacenter, making it easy to handle multiple types of workloads at once. So what are you waiting for? Pick your platform and start virtualizing today. Use the application links below to explore the many possibilities of cloud computing.

Web-based Applications Any application can be delivered over the web. No installation is required, and there are no software licenses to purchase. By moving your applications online, you can benefit from the increased access to users and flexibility of deployment.

Build and Deploy Applications Applications don't have to be complex to be deployed to the cloud. You can use many types of languages, deployment tools, and management consoles to build applications for the cloud. New tools are continually being developed to make the application development process easier
